# Climate Neutral

By 2030, Sikla intends to operate as a completely climate-neutral company and compensate for unavoidable emissions.

For this reason, the entire fleet of vehicles will be entirely on electricity over the long term, with most electricity coming from renewable sources.

Our products are manufactured locally, avoiding long transport routes. Currently, 67 % of the products are manufactured in Germany and another 25 % in Europe.

# EcoVadis

# ecovadis

Sikla's sustainability management is assessed by Ecovadis, the largest platform for sustainability ratings.

By the end of 2023, we aim to achieve the bronze medal for all Sikla branches.

To become more sustainable, we plan to achieve the Ecovadis Silver Medal by the end of 2025 and Gold by the end of 2029.

# Global Compact

Sikla UK is pleased to announce that we are officially certified by the United Nations Global Compact.

We will work together to put the ten official principles into practice and accomplish the Sustainable Development Goals.

We are proud to join the world's largest sustainability network and to increase our work in human rights, labour standards, environmental protection and anti-corruption.

## In cooperation with partner

## Strengthen & Distribute

# ISO 14001

With the environmental standard certification DIN EN ISO 14001, we are sending a clear message showing that we value the responsible use of natural resources.

This is why we are starting an environmental management system in all our Sikla branches. The objectives of the ISO 14001 certification are to promote environmental protection, reduce environmental impacts and thus properly achieve environmental goals.
